

### **Amendments to the Specification**

Kindly insert the following new paragraph after line 11 on Specification page 11:

Figure 18A shows a side view of a spring portion biasing a shaft to cause an engagement with a disk.

Kindly insert the following replacement paragraph for the paragraph beginning on Specification page 31, line 21 and ending on Specification page 32, line 10:

As shown in Figure 18 a lower housing wall 247 supports a support member 249 thereon. Support member 249 includes slots 251 and 253 therein which accept shafts 248 and 254 therein, respectively. Wall 247 also has integrally formed therein leaf springs portions 243, 245. Leaf spring portion 243 biases shaft ~~248~~ 245 and stripping member 246 toward middle disk portion 218 by biasingly engaging a clip portion 241 of member 250. Spring portion 245 acts on shaft 254 to bias carry away roll 252 to engage the middle disk portion 218, which is also shown in Figure 18A. The ends of each shaft 248 and 254 opposed of the roller is mounted in supporting connection with the housing through a releasable pivot connection (not separately shown) which enables each roll to maintain biasing engagement with the middle disk portion. The pivot connection enables each of the stripping member and carry away member and their respective shafts to be released from operative supporting connection from the housing and replaced. Of course, in other embodiments other releasable mounting arrangements may be used.
